WORK EXPERIENCE

Global Impact Metrics - Economic Consultant

November 2024 - Present

- Quantitative analysis and management of large-scale datasets.
- Statistical analysis and reproducible research workflows.
- Literature reviews, evidence synthesis, and public policy analysis.
- Impact evaluation and cost-benefit analysis.
- Internal web services deployment management.

Marc Bloch Research Center

April 2023 - August 2023

- Research support and literature review.
- Academic event coordination and administrative support.

French-German Chamber of Commerce and Industry

September 2022 - March 2023

- Economic analysis of firms.
- Commercial data collection, management, and reporting.

Beauchamp Town Hall

July 2022 - September 2022

- Economic and local public policy analysis.
- Data collection and statistical reporting.

Sciences Po, Centre de Sociologie des Organisations (CSO)

July 2021 - September 2021

- Data collection through the Twitter API using R.
- Data processing, management, and preparation for empirical analysis.
- Network visualisation with the igraph package.

EDUCATION

2023 – 2025 Master's of Research in Economics at [Sciences Po](#):

- Macroeconomics, Microeconomics, Econometrics - I, II, and III.
- Programming classes (Project management, R, Julia, Python).
- Financial Economics, Labor Economics, Public Economics.
- International Trade, Political, Organizational, and Development Economics.

My [Master's Thesis](#), under the supervision of [Jeanne Commault](#) and [Paul Bouscasse](#), was one of the "[Best Master Thesis](#)" with a grade of 16.5/20

2019 – 2023 Double Bachelor in Social Sciences and Political Science at [Sciences Po](#) and [Freie Universität](#)

2019 – 2022 Bachelor in Economics and Business at [Lorraine University](#)

2019 Baccalauréat at [Gustave Monod Highschool, Enghien-les-Bains](#)

2019 Abitur at [Gustave Monod Highschool, Enghien-les-Bains](#)

SKILLS

Programming

- R : Advanced level for data analysis, data management, economic modelling, package management.
 - Statistical analysis (tidyverse packages: dplyr, tidyr, etc., data.table, igraph),
 - Data collecting (rvest, httr),
 - Data visualization (ggplot2, rmarkdown, Shiny), package management.
- Julia : Advanced level for data analysis, data management, economic modelling, package management.
 - Statistical Analysis (descriptive analysis, inferential statistics tools, GLM.jl, etc...),
 - Economic modelling (macroeconomics models, simulations, numerical solving of analytically unsolvable equations),
 - Numerical methods (parallel computing, value-function iteration, policy-function iteration, algorithmic assessment),
 - Results presentation via integration to frameworks such as Plotly and Quarto.
- Elementary level with other statistical softwares : Stata, MATLAB.
- Elementary level in Python, SQL, and C.

Web Development

- Web application services management and deployment with Docker.
- GitLab / GitHub CI/CD test and deployment.
- Experience with the Quarto framework (see my [main website](#)).

Others

- Microsoft Office Suite.
- L^AT_EX.
- Shell and Unix architecture knowledge, services management with systemctl.
- Experience in VPN deployment with Wireguard.
- Version control and code management with git.

SELECTED PROJECTS

[TwoWayFEWeights package in Julia](#)

Julia package implementing the computation of weights associated with TWFE regression and the robust estimator proposed by de Chaisemartin & D'Haultfoeuille 2020. It is a translation of the original R package developed by the ERC REALLYCREDIBLE team.

[Master Thesis Website and Replication Package](#)

Repository-based companion website for a computational Master's thesis, developed using Julia, Pluto.jl, Quarto, and Plotly. Provides interactive visualizations, reproducible notebooks, and a complete replication package, illustrating modern workflows for computational and reproducible research.

[Replication of Monge-Naranjo et al. \(2019\)](#)

Group project involving the translation of the original Stata replication package of *Natural Resources and Global Misallocation* (American Economic Journal: Macroeconomics, 2019) to Julia. Developed for Florian Oswald's Computational Economics course at Sciences Po. The project emphasizes reproducibility and demonstrates the use of Julia for computational economics.

[Research Portfolio Tutorial](#)

Tutorial introducing the creation and maintenance of an online research portfolio using VS Code, Git, GitHub, Quarto, and GitHub Pages. Designed to help fellow research students develop reproducible workflows and communicate their work online.

LANGUAGES

French	Native (C2)
Portuguese	Spoken (C2)
German	Professional level (C1)
English	Professional level (C1) - TOEFL : 104/120
Spanish	Beginner level (B1)
Italian	Beginner level (B1)
